Building the future we want Banwari Lal 2005-01-01 Rapid Urbanization And Industrialization In India Visibly Spell The Need To Put In Place Effective And Efficient Systems For Disposal Of The Waste Generated - Municipal Solid Waste, Plastic, Waste Water, And So On. As In Other Asian Countries, In India Too, Landfills, Groundwater Pollution, Residues Produced By Agro-Industrial Processes, And Other Similar Problems Pose A Threat. It Is Estimated That Methanogenic Anaerobic Digestion Releases Over 250 Million Tonnes Of Methane Gas Annually All Over The World - Methane Is A Substantial Contributor To Global Warming. These Facts Compel Us To Take A Closer Look At The Need To Recycle Waste Rather Than Simply Find Ways To Dispose Of It. At A Time When The World Is Confronted With The Twin Challenges Of Fossil-Fuel Depletion And Environmental Degradation, The Book Emphasizes How Addressing The Latter Could Contribute To Mitigating The Former By Addressing The Issues Of Generating Energy From Waste, Describing Scientific Methods To Minimize Its Hazardous Impacts, Providing An Assessment Of The Existing Technologies, And Highlighting Various Aspects Of Biofuel Production And Cogeneration.

Wealth from Waste Banwari Lal 2011-01-01 This edition of Wealth from Waste takes a closer look at the different avenues that consider waste a resource for recycling and valorization rather than contemplating its disposal. The book provides insight into the possible technological innovations and options that can be adopted, along with the current trends and opportunities that are available worldwide for converting waste into value-added resources. In the individual chapters, authors have discussed and reviewed the possible options for conversion of various waste streams generated from municipalities and other urban establishments and biomass-based waste generated from argo-based industries and different industrial activities into an energy resource. The book also looks into the regulatory framework available in the country, which is required at every stage of the life cycle of waste, and the needs for improvement of this framework. This edition will serve as an important reference for a wide range of stakeholders-from policy-makers to environmentalists, development practitioners, academicians, waste management experts, researchers, and corporate decision-makers.

Bio-Diesel Gadepalli Ravi Kiran Sastry This is a well known fact that the resources of mineral oils are depleting day-by-day, and the cost of exploration of the remaining reserves is bound to escalate. Moreover, the burning of fossil fuels increases the level of carbon-dioxide in the atmosphere causing the 'Green House' effect. In this context, a viable and sustainable alternative fuel is necessary to cater to a large fleet of automobiles across the world. The advent of bio-diesel has come to the rescue in such a warranting situation. Efforts are being made to streamline the systems to produce bio-diesels at economically viable rates and apply them in running the diesel engines in lieu of petro-diesel. And the present study is an attempt in this direction. It seeks to exploit non-edible oil plants, especially Jatropha, mahua and palm, to replace diesel oil usage in the conventional diesel engines. Providing transesterification procedure for all the three non-edible oils, it deals with the heat release rate calculations based on the pressure data collected in the combustion chamber. It also extends discussion on the instrumentation and experimentation, as well as the results of the findings.

Modern Diesel Technology Robert N. Brady 1996 Through a carefully-maintained "building block" approach, this text offers an easy-to-understand guide to automotive, truck, and heavy equipment diesel engine technology in a single, comprehensive volume. Text focus is on state-of-the-art technology, as well as on the fundamental principles underlying today's technological advances in service and repair procedures. Industry accepted practices are identified; and, readers are encouraged to formulate a sound understanding of both the "why" and the "how" of modern diesel engines and equipment. Thorough, up-to-date treatment of diesel technology encompasses major advancements in the field, especially recent developments in the use of electronics in heavy-duty trucks, off-highway equipment, and marine applications. The text's primary focus is on state-of-the-art "electronic fuel injection" systems such as those being used by such manufacturers as Caterpillar, Cummins, Detroit Diesel, Volvo, and Mack. A systematic, structured organization helps readers learn step-by-step, beginning with engine systems, and working logically through intake/exhaust, cooling, lubrication, and fuel injection systems, highlighting major changes in today's modern engines.

Thermo- and Fluid Dynamic Processes in Diesel Engines 2 James H. Whitelaw 2013-04-17 This is the second book edited with a selection of papers from the two-yearly THIESEL Conference on Thermo- and Fluid Dynamic Processes in Diesel Engines, organised by CMT-Mvtors Termicos of the Universidad Politecnica de Valencia, Spain. This volume includes versions of papers selected from those presented at the THIESEL 2002 Conference held on 10th to 13 September 2002. We hope it will be the second volume of a long series reflecting the quality of the THIESEL Conference. This year, the papers are grouped in six main thematic areas: State of the Art and Prospective, Injection Systems and Spray Formation, Combustion and Emissions, Engine Modelling, Alternative Combustion Concepts and Experimental Techniques. The actual conference covered a wider scope of topics, including Air Management and Fuels for Diesel Engines and a couple of papers included reflect this variety. However, the selection of papers published here represents the most current preoccupations of Diesel engine designers, namely how to improve the combustion process using new injection strategies and alternative concepts such as the Homogeneous Charge Combustion Ignition.
