Dislocations in Solids Hideji Suzuki 1985-12 This volume comprises the Proceedings of the Yamada Conference IX on Dislocations in Solids, held in August 1984 in Tokyo. The purpose of the conference was two-fold: firstly to evaluate the increasing data on basic properties of dislocations and their interaction with other types of defects in solids and, secondly, to increase understanding of the material properties brought about by dislocation-related phenomena. Metals and alloys, semi-conductors and ions crystals were discussed. One of the important points of contention was the electronic state at the core of dislocation. Another was the dislocation model of amorphous structure.

Memory in a Social Context Takashi Tsukiura 2017-12-15 This book explores new points of view of human memory in the link among mind, brain, and society. Research of human memory traditionally has been in the field of experimental psychology, and a number of psychological researchers have come upon important findings regarding human memory. They have provided critical theories to explain human memory processes, but this approach is hitting a brick wall. The experimental psychological approach or laboratory-based approach to human memory functions is examined in a very controlled environment, but the evidence obtained from this approach may not necessarily reflect real-life events in our mind. In addition, findings from experimental psychology have often ignored the link with biological structures, or the brain. One solution is a cognitive neuroscience approach, in which functional neuroimaging techniques have enabled us to view how memory processes are represented in the brain. In addition, the new approach extends the traditional concept of human memory into a wider framework by reconsidering memory functions in a social context. These advanced approaches help us to understand how "social memory" is represented in the human brain and is processed in real-life situations. The work reported in this volume is at the forefront of cognitive neuroscience in the research of human memory in a social context and the potential application of memory research. This book will help to motivate young scientists and graduate and undergraduate students in psychology and neuroscience.

On a Global Mission: The Automobiles of General Motors International Volume 3 Louis F. Fourie 2016-12-27 Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

Semiconductor Interfaces at the Sub-Nanometer Scale H.W.M Salemink 2012-12-06 The Advanced Research Workshop on the Physical Properties of Semiconductor Interfaces at the Sub-Nanometer Scale was held from 31 August to 2 September, 1992, in Riva del Garda, Italy. The aim of the workshop was to bring together experts in different aspects of the study of semiconductor interfaces and in small-scale devices where the interface properties can be very significant. It was our aim that this would help focus research of the growth and characterization of semiconductor interfaces at the atomic scale on the issues that will have the greatest impact on devices of the future. Some 30 participants from industrial and academic research institutes and from 11 countries contributed to the workshop with papers on their recent work. There was ample time for discussion after each talk, as well as a summary discussion at the end of the meeting. The major themes of the meeting are described below. The meeting included several talks relating to the different growth techniques used in heteroepitaxial growth of semiconductors. Horikoshi discussed the atomistic processes involved in MBE, MEE and MOCVD, presenting results of experimental RHEED and photoluminescence measurements; Foxon compared the merits of MBE, MOCVD, and eBE growth; Molder described RHEED studies of Si/Ge growth by GSMBE, and Pashley discussed the role of surface reconstructions in MBE growth as seen from STM studies on GaAs. On the theoretical side, Vvedensky described several different methods to model growth: molecular dynamics, Monte Carlo techniques, and analytic modeling.

The Mystique of Transmission Wendi L. Adamek 2007-05-15 The Mystique of Transmission is a close reading of a late-eighth-century Chan/Zen Buddhist hagiographical work, the Lidai fabao ji (Record of the Dharma-Jewel Through the Generations), and is its first English translation. The text is the only remaining relic of the little-known Bao Tang Chan school of Sichuan, and combines a sectarian history of Buddhism and Chan in China with an account of the eighth-century Chan

master Wuzhu in Sichuan. Chinese religions scholar Wendi Adamek compares the Lidai fabao ji with other sources from the fourth through eighth centuries, chronicling changes in the doctrines and practices involved in transmitting medieval Chinese Buddhist teachings. While Adamek is concerned with familiar Chan themes like patriarchal genealogies and the ideology of sudden enlightenment, she also highlights topics that make Lidai fabao ji distinctive: formless practice, the inclusion of female practitioners, the influence of Daoist metaphysics, and connections with early Tibetan Buddhism. The Lidai fabao ji was unearthed in the early twentieth century in the Mogao caves at the Silk Road oasis of Dunhuang in northwestern China. Discovery of the Dunhuang manuscripts has been compared with the discovery of the Dead Sea Scrolls, as these documents have radically changed our understanding of medieval China and Buddhism. A crucial volume for students and scholars, *The Mystique of Transmission* offers a rare glimpse of a lost world and fills an important gap in the timeline of Chinese and Buddhist history.
